

Installing Aarhus Workbench version 3

Installation

Installing is simple on Win XP and Win 2000 computers (Windows 7 not supported yet)

1. Uninstall previous versions of Aarhus Workbench and all additional components. A step through guide for uninstalling Aarhus Workbench is found at:
http://www.hgg.geo.au.dk/HGGSoftware/workbench/Uninstall_workbench.pdf
2. Download Aarhus Workbench installation from:
http://www.hgg.geo.au.dk/HGGsoftware/workbench/Workbench_full.exe.
3. Run the installation form “Add or remove programs” form.
4. During the installation we recommend to use suggested settings for all components and restarting the computer when asked to.
5. Copy the license file Workbench.lic to the installation directory, typically c:\Program Files\HGG\Workbench. Note: old license files named License3GW.lic or Demo3GW.lic are no longer valid.

Updates

When Aarhus Workbench is started it will check for updates from the Internet. Make sure that you computer is connected to the internet and answer *Yes* if prompted for update.

The Installation of Aarhus Workbench includes

- BDE database engine version 5.02
- Firebird database server version 2
- MapX version 5
- DAO drivers, necessary for using the Access database
- MapInfo fonts
- Sentinel Key driver for Win 32- and 64-bit
- FlameRobing, database management program for Interbase/firebird databases
- Aarhus Workbench.
